

Solve each problem.

1) $\frac{2}{3} - \frac{1}{9} =$

2) $\frac{4}{5} + \frac{2}{3} =$

3) $\frac{3}{5} - \frac{1}{2} =$

4) $\frac{5}{6} + \frac{1}{2} =$

5) $\frac{5}{6} - \frac{2}{4} =$

6) $\frac{2}{3} + \frac{2}{6} =$

7) $\frac{2}{3} - \frac{4}{8} =$

8) $\frac{7}{8} + \frac{7}{9} =$

9) $\frac{4}{5} - \frac{5}{8} =$

10) $\frac{1}{4} + \frac{1}{5} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{2}{3} - \frac{1}{9} = \frac{6}{9} - \frac{1}{9} = \frac{5}{9}$

2) $\frac{4}{5} + \frac{2}{3} = \frac{12}{15} + \frac{10}{15} = 1\frac{7}{15}$

3) $\frac{3}{5} - \frac{1}{2} = \frac{6}{10} - \frac{5}{10} = \frac{1}{10}$

4) $\frac{5}{6} + \frac{1}{2} = \frac{5}{6} + \frac{3}{6} = 1\frac{2}{6}$

5) $\frac{5}{6} - \frac{2}{4} = \frac{10}{12} - \frac{6}{12} = \frac{4}{12}$

6) $\frac{2}{3} + \frac{2}{6} = \frac{4}{6} + \frac{2}{6} = 1\frac{0}{6}$

7) $\frac{2}{3} - \frac{4}{8} = \frac{16}{24} - \frac{12}{24} = \frac{4}{24}$

8) $\frac{7}{8} + \frac{7}{9} = \frac{63}{72} + \frac{56}{72} = 1\frac{47}{72}$

9) $\frac{4}{5} - \frac{5}{8} = \frac{32}{40} - \frac{25}{40} = \frac{7}{40}$

10) $\frac{1}{4} + \frac{1}{5} = \frac{5}{20} + \frac{4}{20} = \frac{9}{20}$

**Answers**

1. $\frac{5}{9}$

2. $1\frac{7}{15}$

3. $\frac{1}{10}$

4. $1\frac{2}{6}$

5. $\frac{4}{12}$

6. $1\frac{0}{6}$

7. $\frac{4}{24}$

8. $1\frac{47}{72}$

9. $\frac{7}{40}$

10. $\frac{9}{20}$
