

Solve each problem.

1) $\frac{2}{4} - \frac{1}{7} =$

2) $\frac{2}{5} + \frac{1}{7} =$

3) $\frac{2}{6} - \frac{2}{8} =$

4) $\frac{7}{8} + \frac{5}{7} =$

5) $\frac{8}{10} - \frac{2}{3} =$

6) $\frac{5}{6} + \frac{2}{8} =$

7) $\frac{5}{7} - \frac{1}{9} =$

8) $\frac{5}{7} + \frac{6}{9} =$

9) $\frac{6}{8} - \frac{3}{4} =$

10) $\frac{3}{5} + \frac{1}{4} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{2}{4} - \frac{1}{7} = \frac{14}{28} - \frac{4}{28} = \frac{10}{28}$

2) $\frac{2}{5} + \frac{1}{7} = \frac{14}{35} + \frac{5}{35} = \frac{19}{35}$

3) $\frac{2}{6} - \frac{2}{8} = \frac{8}{24} - \frac{6}{24} = \frac{2}{24}$

4) $\frac{7}{8} + \frac{5}{7} = \frac{49}{56} + \frac{40}{56} = 1\frac{33}{56}$

5) $\frac{8}{10} - \frac{2}{3} = \frac{24}{30} - \frac{20}{30} = \frac{4}{30}$

6) $\frac{5}{6} + \frac{2}{8} = \frac{20}{24} + \frac{6}{24} = 1\frac{2}{24}$

7) $\frac{5}{7} - \frac{1}{9} = \frac{45}{63} - \frac{7}{63} = \frac{38}{63}$

8) $\frac{5}{7} + \frac{6}{9} = \frac{45}{63} + \frac{42}{63} = 1\frac{24}{63}$

9) $\frac{6}{8} - \frac{3}{4} = \frac{6}{8} - \frac{6}{8} = \frac{0}{8}$

10) $\frac{3}{5} + \frac{1}{4} = \frac{12}{20} + \frac{5}{20} = \frac{17}{20}$

Answers

1. $\frac{10}{28}$

2. $\frac{19}{35}$

3. $\frac{2}{24}$

4. $1\frac{33}{56}$

5. $\frac{4}{30}$

6. $1\frac{2}{24}$

7. $\frac{38}{63}$

8. $1\frac{24}{63}$

9. $\frac{0}{8}$

10. $\frac{17}{20}$
