

Solve each problem.

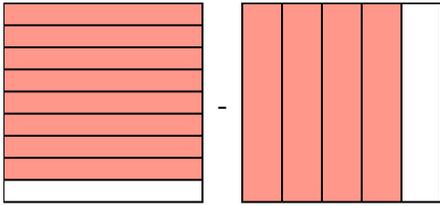

1) $\frac{2}{3} - \frac{2}{4} =$

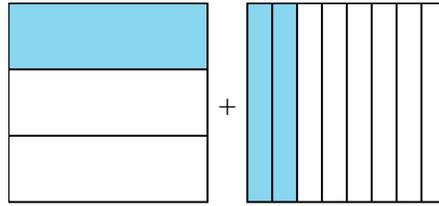

2) $\frac{4}{6} + \frac{1}{3} =$

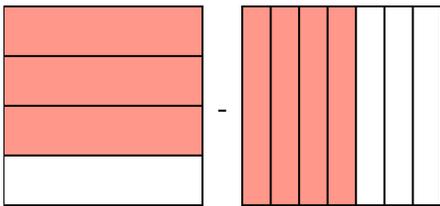

3) $\frac{8}{9} - \frac{4}{5} =$

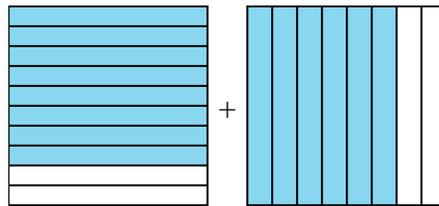

4) $\frac{1}{3} + \frac{2}{8} =$

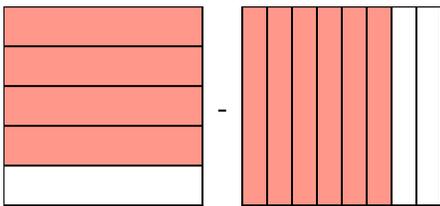

5) $\frac{3}{4} - \frac{4}{7} =$

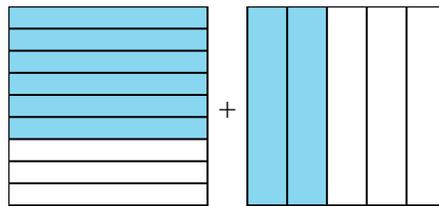

6) $\frac{8}{10} + \frac{6}{8} =$

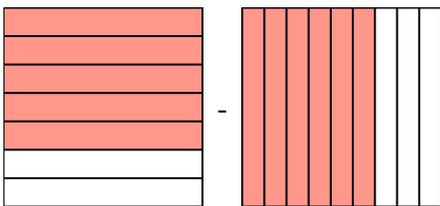

7) $\frac{4}{5} - \frac{6}{8} =$

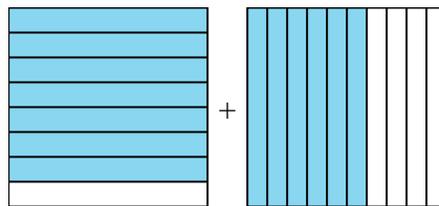

8) $\frac{6}{9} + \frac{2}{5} =$

9) $\frac{5}{7} - \frac{6}{9} =$

10) $\frac{7}{8} + \frac{6}{10} =$

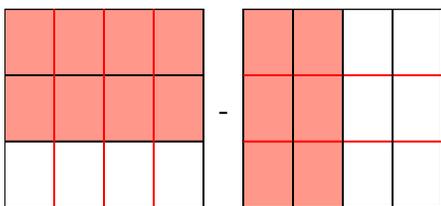

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

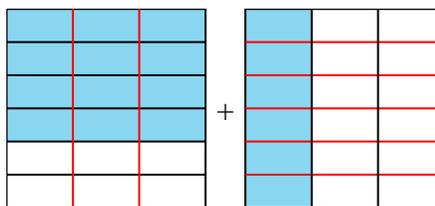

Solve each problem.

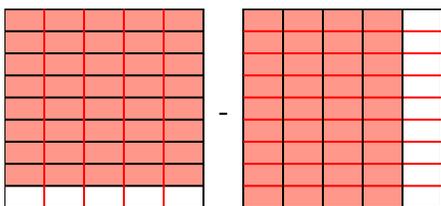

1) $\frac{2}{3} - \frac{2}{4} = \frac{8}{12} - \frac{6}{12} = \frac{2}{12}$

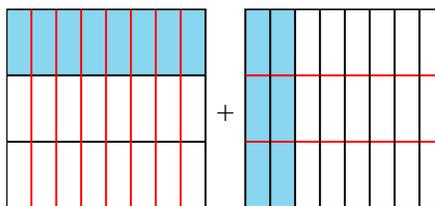

2) $\frac{4}{6} + \frac{1}{3} = \frac{4}{6} + \frac{2}{6} = 1\frac{0}{6}$

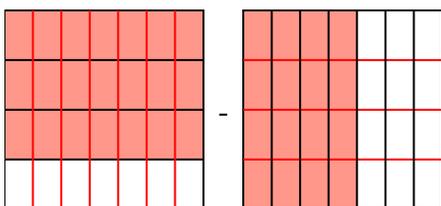

3) $\frac{8}{9} - \frac{4}{5} = \frac{40}{45} - \frac{36}{45} = \frac{4}{45}$

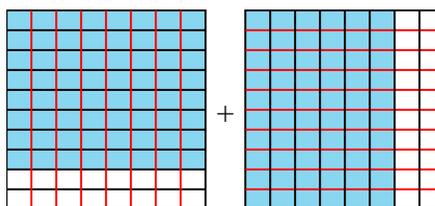

4) $\frac{1}{3} + \frac{2}{8} = \frac{8}{24} + \frac{6}{24} = \frac{14}{24}$

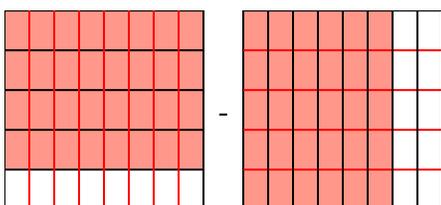

5) $\frac{3}{4} - \frac{4}{7} = \frac{21}{28} - \frac{16}{28} = \frac{5}{28}$

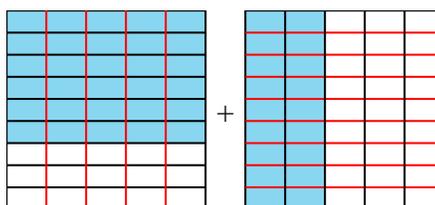

6) $\frac{8}{10} + \frac{6}{8} = \frac{32}{40} + \frac{30}{40} = 1\frac{22}{40}$

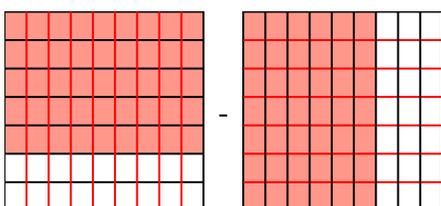

7) $\frac{4}{5} - \frac{6}{8} = \frac{32}{40} - \frac{30}{40} = \frac{2}{40}$

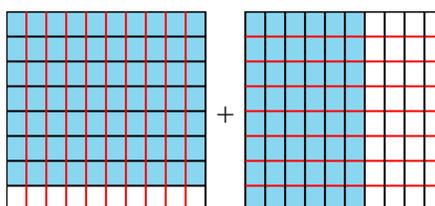

8) $\frac{6}{9} + \frac{2}{5} = \frac{30}{45} + \frac{18}{45} = 1\frac{3}{45}$

9) $\frac{5}{7} - \frac{6}{9} = \frac{45}{63} - \frac{42}{63} = \frac{3}{63}$

10) $\frac{7}{8} + \frac{6}{10} = \frac{35}{40} + \frac{24}{40} = 1\frac{19}{40}$

Answers

1. $\frac{2}{12}$

2. $1\frac{0}{6}$

3. $\frac{4}{45}$

4. $\frac{14}{24}$

5. $\frac{5}{28}$

6. $1\frac{22}{40}$

7. $\frac{2}{40}$

8. $1\frac{3}{45}$

9. $\frac{3}{63}$

10. $1\frac{19}{40}$
