

**Rotate each shape. Answer as the new coordinates.** θ = Angle of Rotation**Rotation Formula**

$$x1 = x \times \cos(\theta) - y \times \sin(\theta)$$

$$y1 = x \times \sin(\theta) + y \times \cos(\theta)$$

In the example to the right the shape is at coordinates (1,4). Lets find the coordinates if we rotated the shape 60° .

1. $x1 = 1 \times \cos(60) - 4 \times \sin(60)$

$$y1 = 1 \times \sin(60) + 4 \times \cos(60)$$

2. $x1 = 1 \times 0.5 - 4 \times 0.87$

$$y1 = 1 \times 0.87 + 4 \times 0.5$$

3. $x1 = 0.5 - 3.48$

$$y1 = 0.87 + 2$$

4. $x1 = -2.98$

$$y1 = 2.87$$

5. Looking at shape, we can see that rotated 60° it is at $(-2.98, 2.87)$.

Answers

1. _____

2. _____

3. _____

4. _____

- 1) Rotate the shape 99° around the point (0,0).

- 2) Rotate the shape -40° around the point (0,0).

- 3) Rotate the shape -292° around the point (0,0).

- 4) Rotate the shape 45° around the point (0,0).

**Rotate each shape. Answer as the new coordinates.** θ = Angle of Rotation**Rotation Formula**

$$x1 = x \times \cos(\theta) - y \times \sin(\theta)$$

$$y1 = x \times \sin(\theta) + y \times \cos(\theta)$$

In the example to the right the shape is at coordinates (1,4). Lets find the coordinates if we rotated the shape 60° .
